FIXED LOD

IN THIS FIXED I WANT TO SHOW THE FIXED SALES
SO I KEPT IN COLUMNS CATEGORY,CITY,SEGEMENT
ROWS -SALES AND I CREATED THE NEW CALCUTION FIELD AND WRITE MY CODE IN THAT FIELD
EG- { FIXED [Sub-Category]:SUM([Sales])}

EXCLUDE LOD

IN THIS EXCLUDE I WANT TO SHOW THE PERFECT CALCULATION OF DIMENSION OF VIEW
SO I KEPT IN COLUMNS PRODUCT NAME,CITY
ROWS -PROFIT AND I CREATED THE NEW CALCUTION FIELD AND WRITE MY CODE IN THAT FIELD
EG- { EXCLUDE [Product Name]:SUM([Profit])})

FILLED MAPS

IN THIS FILLED MAP I WANT TO SHOW THE PROFITS OF EACH STATE IN MAPS
SO I KEPT IN MARKS STATE AS COLOR ,PROFIT AS LABEL,REGION AS DETAIL.

DUAL AXIS MAPS

IN THIS FILLED MAP I WANT TO SHOW THE PROFITS AND SALES COMBIED OF EACH STATE IN MAPS
so I kept in COLUMNS THE longitude and in ROWS I kept a latitude so I kept both latitudes by dragging it along CRTL CLICK ON LATITUDE after that you will get two types of latitudes in the second latitude you should take the what you kept before
in that so I kept the profit IN FIRST LATITUDE so I kept sales now in second latitude and now in the ALL section you will get the options colour and size and you can do the colour and different options and after that you have to click on latitude on
second side and click the right click and do the dual axis and you will get the options that combined the sales and profit as shown in the sheet

TOP N PARAMETER

IN THIS I WANT TO SHOW THE SUBCATEGORY SALES IN BY TOP N PARMETER FILTER
so I kept in columns sales AND in the rows I kept sub category for the sales showing and I kept index for a numerical numbers by order wise as shown in the sheet and after that I kept sub category in filter and after clicking what you created in
parametor and right click and click show the filter and you will get the options and after that i kept in ascending or descending order to show by top

DIMENSION PARAMETER

IN this I want to show the sales by categories,sub categories,product name by using parameter and calculated field
in the columns I kept the sales AND so first of all I created a parameter and I kept giving by product name,category, sub category in the list option and after that I kept a code in a calculated field now in the parameter, right click on parameter and you
will get the show filter so click on that and you will get right side you will get filter option to filter the category,sub category ,product name after created that solution and i dragged into the rows option i filter like like that
